

NTI, a Network Connex Company, Inks Hyperscale Data Center Build Outs Agreement with Meisei Correspondence Co., LTD, a Leading Japanese Telecom Engineering and Construction Business

CHICAGO, IL, December 1, 2022 — Network Connex, a trusted leader in mission-critical digital communications infrastructure services, is pleased to announce that National Technologies (NTI), a Network Connex subsidiary, has signed a long-term partnership agreement with [Meisei Correspondence Co., LTD](#) (Meisei), a leading Japanese telecommunications engineering and construction business. The objective of the agreement is to expand the hyperscale data center engineering installation opportunities in Japan by combining NTI's experience in data center build outs in North America, Europe, and Asia with Meisei's strong capabilities in the telecommunications engineering sector. In addition, NTI will be the exclusive provider of Sales and Marketing services for Meisei in the territory.

"We're honored to formalize and deepen our existing relationship with Meisei," says Lewis Kessler, President & COO of National Technologies, a Network Connex Company. He further adds *"Past collaborative projects between NTI and Meisei have been very successful for both companies, and we're looking forward to continuing the positive momentum in 2023 and beyond."*

NTI offers unmatched expertise in deployment services for fiber optic and data center infrastructure. According to the agreement, they will provide project management services for data center build outs to ensure the highest level of quality control. In addition, NTI will leverage its existing relationships with North American customers to drive data center build outs in Japan.

Japan's growing cloud computing market, increasing high-speed internet, and government regulations for local data security are some of the factors driving the demand for data centers in the country.

About Network Connex

Network Connex brought together the expertise of Advantage Engineers, CCSI Networks, Fairhaven Integration Services, National Technologies (NTI), and VERTICOM to leverage regional strengths, operational synergies, and expand our footprint to provide best-in-class, self-performing digital communications infrastructure services throughout the U.S. and globally.

Our unique combination of industry-leading firms creates the most robust portfolio of end-to-end services for rapid, high-quality solution design, deployment, and implementation -- providing our customers with a competitive edge in today's rapidly evolving dynamic markets.
